

# VELBUS HOME CENTER INTERFACE SERVER

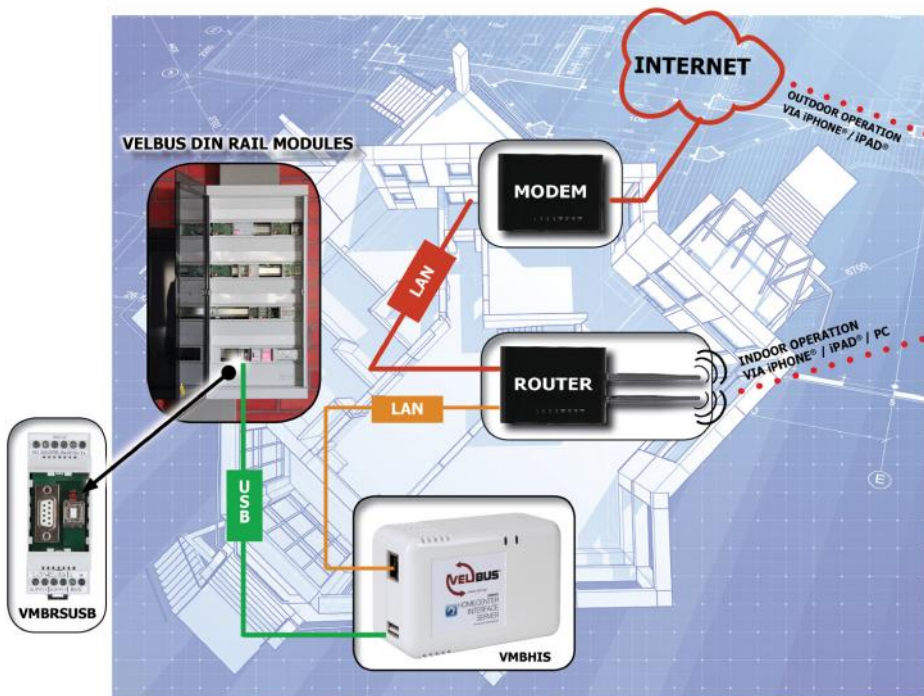

Component: VMBHIS

- In the box:**
- interface module
  - ethernet cable 1.5m
  - USB cable
  - power cable
  - power plug

The VMBHIS is the hardware solution for Stijnen Solutions Home center. A ready for use package to control your Velbus installation via iPhone/iPad or Windows. The plug consumes about 5 Watt when fully functional. A green solution indeed. Besides the contents of the box, all you need is a functioning Velbus installation with a VMB1USB or VMBSUSB communication module. You connect the Velbus USB interface and the network (Wi-Fi router is required for iPhone/iPad); then you only need to connect the VMBHIS.

## VELBUS HOME CENTER INTERFACE SERVER CONNECTION EXAMPLE

Available on the App Store
